Strategy

Japan Local Meetup

Antitrust Policy Notice

- Linux Foundation meetings involve participation by industry competitors, and it is the Linux Foundation's intention to conduct all of its activities in accordance with applicable antitrust and competition laws. It is therefore extremely important that attendees adhere to meeting agendas, and be aware of—and refrain from participating in—any activities prohibited under applicable U.S. state, federal, or foreign antitrust and competition laws.
- Examples of prohibited actions at Linux Foundation meetings and in connection with Linux Foundation activities are described in the Linux Foundation Antitrust Policy, available at <http://www.linuxfoundation.org/antitrust-policy>. If you have questions about these matters, please contact your company's legal counsel, or, if you are a member of the Linux Foundation, feel free to contact Andrew Updegrave of Gesmer Updegrave LLP, which provides legal counsel to the Linux Foundation.

Antitrust Compliance Policy

(Antitrust Policy)

- Participation by companies that are competitors in the industry is essential for Linux Foundation (hereinafter referred to as “LF”) meetings. The LF conducts all of its activities in compliance with all applicable antitrust and competition laws. Therefore, it is critically important that meeting attendees take care to conduct meetings in accordance with the agenda and refrain from participating in any activities prohibited under domestic or international antitrust and competition laws.
- Examples of prohibited conduct at LF meetings and in connection with LF activities are set forth in the LF Antitrust Compliance Policy, available at <https://www.linuxfoundation.jp/antitrust-policy/>. If you have any questions regarding these matters, please consult your company’s legal counsel or, if you are an LF member, contact Andrew Updegrove of Gesmer Updegrove LLP, the LF’s legal counsel.

Chatham House Rules

- Adherence to Chatham House Rules
 - Recording is not permitted
 - Information received may be shared as meeting notes, but the identity of the speaker must not be disclosed
- Chatham House Rules

TODO

Code of Conduct

- We will conduct our activities in accordance with the Code of Conduct set forth by The Linux Foundation Japan
<https://www.linuxfoundation.jp/code-of-conduct/>
- **Unacceptable Conduct (Excerpt)**
 - **No form of harassment is tolerated**, including—but not limited to—harassment based on gender, gender identity, gender expression, sexual orientation, disability, appearance, body type, race, age, or religion, as well as harassment based on **any** status or position protected by the laws of the country or region where the conference or program is held.
 - Furthermore, the use of abusive, aggressive, or humiliating language; threats; stalking; harassing photographs or recordings; inappropriate physical contact; sexual images; and unwelcome sexual advances or requests for sexual favors are also considered harassment.
 - Participants who are asked to stop harassing behavior must comply with that request immediately. Witnesses or victims of unacceptable behavior should immediately notify the conference organizers.
- **Incident Response (Excerpt)**
 - If a participant is involved in harassing behavior, the conference organizers will take any action deemed appropriate under the circumstances, including issuing a warning to the offender or expelling them from the conference.

OSS Strategy & Hosting: Activity Overview

Last Updated: October 2024

OSS Strategy & Hosting

- OSS Business Strategy and Initiatives for In-House OSS Hosting
 - Moving beyond simply using OSS and ensuring license compliance to the next level (participation, contribution, (Leadership))
- Considering the relationship between businesses closely aligned with OSS and those far removed from it, and discussing the challenges
 - OSS is essential to business
 - OSS itself does not generate profit
 - Profits are generated through the utilization of OSS
 - Visualizing these relationships makes it possible to justify OSS initiatives

OSS Strategy & Hosting

■ Motivation

- A sense that there is a barrier to moving from the "Usage" stage to the higher stages (Participation, Contribution, Leadership)

■ Anticipated Challenges

- It is difficult to see a clear path or role models for transitioning from usage to contribution
- Wouldn't it be helpful to have more concrete OSS strategies to draw upon?
- While "Your OSPO is not my OSPO," even if each OSPO is distinct, there may still be commonalities and best practices across industries and business models

■ Presentation of concrete examples to serve as references

- Present typical examples for each industry and business sector ↗
- Mutual presentation of each company's OSPO initiatives during lightning talks ↗ (Consider implementing this at future Meetups)

OSS Strategy & Hosting

- Imagine the challenges faced by companies (archetypes) that use OSS to conduct business
 - Linux distribution vendors
 - Consumer electronics vendors
 - System integrators
 - Telecom operators
 - Automotive manufacturers
 - Semiconductor vendors
 - Web service companies
 - Universities and research institutions
 - Corporate R&D Departments
 - Local governments and public institutions
- The required OSS contribution activities are largely the same
- However, the degree of impact on business varies depending on the specific activity

OSS Strategy & Hosting: General (In Progress)

	Common
Business Overview	
Desired Outcomes from OSS	
Initiatives to Achieve Objectives	- Recruitment - Communication - OSS: Talent Evaluation? Fostering a Culture?
OSS Activities to Be Implemented	High Priority

OSS Strategy & Hosting - General

	General
Business Overview	A Wide Range of Industries
Desired Benefits from OSS	- Interoperability - Expanding and Developing the Market (Increasing the Potential Customer Base) - Open Innovation (Generating New Value and Ideas) - Cost Sharing (Reducing Costs per Company) - Avoiding vendor lock-in - Talent Acquisition
Initiatives to Achieve These Objectives	Standardization → As expected for a high-level stage, the tasks and standards are demanding - Participation in and leadership of OSS communities - Example: Joint Development Foundation: C2PA (standard) (The CAI OSS implementation is not part of the LF) - CNCF and OpenInfra have clear criteria for donating OSS projects and advancing to higher stages (CNCf incorporates best practices) - (It would be helpful to have a practical guide recommending which Foundation is best, or to have the features and approaches of each Foundation categorized.) - Participating in and Leading OSS Implementation - Communication
OSS Activities to Be Carried Out	High Priority

OSS Strategy & Hosting - General

	General
Business Overview	A Wide Range of Industries
Situation Prior to OSS Initiatives	Unable to compete with the market share of leading companies.
Situation After Adopting OSS	Companies other than the market leaders join forces to compete against them.
Cases Where OSS Adoption Is Not Pursued	In some cases, the market leader may have an advantage by remaining closed-source.

OSS Strategy & Hosting Persona Case Studies (In Progress)

	Linux Distribution Vendor; Sales of Linux Technical Services	Sales of consumer electronics vendors'	System Integrators	Telecommunications Carriers
Business Overview		products	System Contracting and Solution Development	Telecommunications Service Provision
The primary objective for adopting OSS	Promoting and strengthening our own distribution	Streamlining product development and enhancing maintenance	Improving efficiency from development through to operation and maintenance	Ensuring quality and safety throughout the supply chain during the transition to the era of OSS-based Software-Defined technologies
To achieve these objectives	• Expanding the user base • Strengthening distributions	• Support for standard interfaces • Streamlining product development	• Strengthening the lineup of DX solutions • Establishing industry standards (though system)	• Achieve vendor neutrality • Ensure long-term product support
Initiatives	• Ensuring project sustainability	(enhancing functionality/ Supporting short-term development) • Enabling long-term product support	• Experience in system development • Strengthening our presence • Reducing costs through the use of OSS to make it easier to win contracts	• Achieve vendor neutrality • Ensure long-term product support
OSS Activities to Be Implemented	High Priority - Submitting patches	High Priority - Bug Reports	High Priority - Submitting patches	High Priority - Bug Reports
	- Regular community meetings - Issue registration - Participation (GB, AB, TSC)	- Bug Reports - Presentation of Use Cases - Research and Evaluation of OSS Communities • Selection Should this be added? - Isn't sharing information important in any industry?	- Maintainer - Bug Reporting - Issue Registration Should this be added? - Sponsorship initiatives (if not linked to business strategy, it's hard to argue that they contribute to standardization) It's hard to see the connection. Essentially, we need to secure a position, and—since JDF exists to achieve standardization and coordinate with OSS— —so an explanation along the lines of “we need to strengthen our presence” is necessary. - JDF requires ISO/IEC, an international standardization body. It is difficult to explain that basic OSS does not directly contribute to business. PAS (Publicly Available Specifications) are issued by JTC	- Issue creation - Presenting Use Cases - Finding Partners in the Community (Searching for Business Partners)

—though the explanation might be a bit heavy

OSS Strategy & Hosting Persona Case Studies (In Progress)

	Linux distribution vendors	Consumer electronics vendors	SI firms	Telecom Operators
Business Overview	Sales of Linux Technical Services	Product Sales	System Contracting and Solution Development	Provision of Telecommunications Services
Our Primary Goal for OSS	Promoting and strengthening our own distribution	Streamlining product development and enhancing maintenance	Improving efficiency from development through to operation and maintenance	Ensuring quality and safety
Simply using OSS (primarily at the consumer stage)	• Low awareness • Concerns about sustainability	• The need to support proprietary standard interfaces • Significant burden of providing long-term product support • Quality and safety Issues	• Competition between commercial products and OSS (inability to meet OSS adoption needs; need to improve brand awareness and presence) • Divergence from de facto standards	• Development based on proprietary standards • Compliance with proprietary standards • Quality and safety issues in the supply chain
Status Following Initiatives to Contribute to OSS (Primarily at the Contributor level or higher)	• Expansion of the user base • Improved project sustainability • Generating demand for and raising awareness of commercial services	• Improved development efficiency through the open-sourcing of collaborative areas (support for standard interfaces, implementation of long-term product support)	• Strengthening the lineup of DX solutions • Gaining experience in system development • Strengthening our market presence • Reducing costs and making our services • Establishing industry standards (standardization)	• Establishing industry standards (standardization) • Achieving vendor neutrality • Ensuring long-term product support
Cases Where OSS Is Not Adopted	(Specifically, components that are not free of charge) • Providing technical support • Ultra-long-term maintenance services	• Keeping key differentiating features proprietary	• Functionality plugins for enterprise customers • System implementation and operation know-how • Integration solutions with other products (SI itself)	•

OSS Strategy & Hosting Persona Case Studies (In Progress)

	Automotive manufacturers	Semiconductor vendors	Web service companies
Business Overview	Automobile manufacturing and sales	Expanding sales of manufactured chips such as LSIs and SoCs	Web service development and provision
Our Primary Objective Regarding OSS	Ensuring quality and safety within a massive supply chain during the transition to the era of OSS-based Software-Defined systems	Making our proprietary LSIs available on OSS platforms	Realizing efficient functionality and operation of service platforms
Initiatives to Achieve These Objectives	- Establishing industry standards (standardization) - Achieving vendor neutrality - Ensuring long-term product support	- Contributing our proprietary LSI drivers to the upstream project - Promoting a solution development community that leverages LSI features	Optimizing Cloud Maintenance Costs
OSS Activities to Be Implemented	High Priority - Bug Reporting - Issue Registration - Sharing Use Cases - Recruiting Members in the Community (Finding Business Partners) (On hold: I'd like to hear from people in the automotive industry) (On hold: Will contributing to OSS—such as kernel LTS—(including ad hoc reports, etc.) improve the sustainability of OSS?)	High Priority - Submitting Patches - Maintainer (Patch Review, etc.) - Bug Reports - Creating Issues - Case Study Presentation For example, by enhancing the software necessary to run products—such as Linux drivers for the company's own semiconductors—this can indirectly lead to increased sales of the company's products. (Example: Intel: adds support code for its own semiconductors to the Linux kernel in near real time)	Medium Priority - Submitting Patches - Report a Bug - Participate in regular internal community meetings (GB, AB, TSC) - Sponsorship Activities

OSS Strategy & Hosting Persona Case Studies (In Progress)

In fact, the fear that a product won't be adopted unless it supports Linux
, which serves as a source of motivation for some companies → Linux

OSS Strategy & Hosting Persona Case Studies (In Progress)

	Automakers	Semiconductor vendors	Web service companies
Business Overview	Automobile manufacturing and sales	Expanding sales of manufactured chips, such as LSIs and SoCs	Web service development and provision
Our Primary Objective Regarding OSS	Ensuring quality and safety within a massive supply chain during the transition to the era of OSS-based Software-Defined systems	Making our proprietary LSIs available on OSS platforms	Realizing efficient functionality and operation of service platforms
Situation Prior to OSS Initiatives		There were few OSS platforms on which our in-house LSIs could run and even when they did, performance was limited, making it difficult to put them to immediate use and resulting in limited sales. We were unable to compete with the market share held by leading companies.	
Situation After OSS Initiatives		By contributing code to increase the number of OSS platforms on which our proprietary LSIs operate, making them easier to use immediately, and improving performance, we gain a competitive advantage and can more easily increase sales. We collaborate with other companies—other than the market leaders—to compete against them. (Contributor, Leader)	
Cases Where Open-Source Adoption Is Not Pursued		Keep the parts that ensure the competitiveness of the company's own LSI closed-source. (e.g., keeping only the firmware closed-source. Market-leading companies may also have an advantage by keeping certain components closed-source.)	

OSS Strategy & Hosting Persona Case Studies (In Progress)

	Universities and Research Institutions	Corporate R&D Departments	Local Governments and Public Institutions	National Government
Business Overview	Publication of Research Findings and Raising Awareness	Publication of Research Results and Their Application to Business Application	Provision of Public Services	Promoting Economic Development and Economic Security in Our Country Guarantee
Our Primary Goal for OSS	Development and Education in Cutting-Edge Technologies	Development and Commercialization of Cutting-Edge Technologies	Efficient and widespread delivery of public services → Achieving standardization (horizontal expansion) → Adoption of Open Source Software (OSS) for Government Applications	Reducing Dependence on Foreign Companies (Reducing the digital deficit, ensuring economic security)
Initiatives to Achieve These Goals	• Publication of academic papers (followed by presentations at OSS events) • Education through contributions to OSS	• Publication of academic papers (followed by presentation at OSS events) • Incorporating feedback through contributions to OSS	• A framework, such as OSS usage guidelines, is necessary • Establishing and revitalizing OSS communities (OSS hosting) • Promoting “insourcing” among local governments	

OSS Strategy & Hosting Persona Case Studies (In Progress)

OSS Activities to Be Implemented	High Priority - Meetup presentations - Presentation of Use Cases - Recruiting Members (Finding Business Partners) - Building a Local Community - Technical Training - Training on OSS Development Methods	High Priority - Meetup Presentations - Presentation of Use Cases - Recruiting Members (Finding Business Partners) - Building a Local Community	High Priority - Establishing Common Standards - Formation of Local Communities	
----------------------------------	--	---	---	--

OSS Strategy & Hosting Persona Case Studies (In Progress)

	Universities and Research Institutions	Corporate R&D Departments	Local Governments and Public Institutions	National
Project Overview	Publication of Research Findings and Raising Awareness	Publication of Research Results and Their Application to Business Application	Provision of Public Services	Promoting Economic Development and Economic Security in Our Country Ensuring
The primary objective sought from OSS	Development of cutting-edge technologies and education	Development and commercialization of cutting-edge technologies	Efficient and widespread provision of public services → Achieving standardization (horizontal expansion) → Making Government Software Open Source	Reducing Dependence on Foreign Companies (Reducing the digital deficit, ensuring economic security)
Situation Prior to OSS Initiatives				
Situation After Adopting OSS				

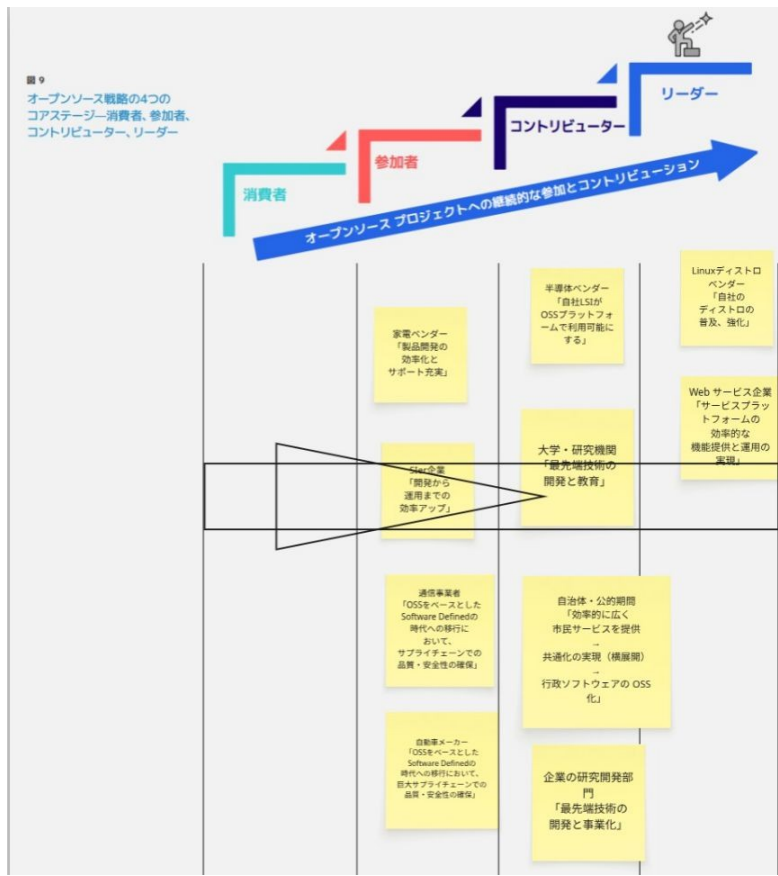

OSS Strategy & Hosting Persona Case Studies (In Progress)

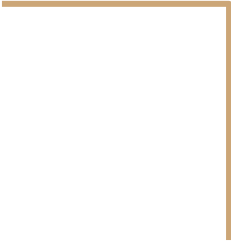

Cases Where OSS Adoption Is Not Implemented				
---	--	--	--	--

OSS Strategies for Each Case Study: Classification into Four Stages (Under Review)

April 10 Notes

- Before classifying, it would be helpful to see how things changed from “when there was no OSS” to “when there was OSS”
 - What benefits emerged before and after
 - Which state is the right one for climbing the OSS ladder?

Sales of OSS-Related Services

(Tier 1)

March 15, 2024 View

Tier 1: Companies Providing Services as OSS

- Where the Main Value Lies in Business
 - a. Delivering value primarily through the provision of OSS
- Taking Linux as an example, would that be distribution vendors?
 - a. Red Hat Linux
 - b. Canonical
 - c. Wind River
 - d. MIRACLE LINUX
- Relationship with the OSS community
 - a. Maintainers, administrators, or core members of the Linux community

Tier 1: Companies Providing Services as OSS

- Business Challenges

- a. Certification from hardware vendors (support for new hardware)
- b. Maintaining compatibility (backporting)
- c. Security measures (version updates and distribution)
- d. Technical support

- Business Value

- a. OSS itself cannot be sold (not that selling it is prohibited, but it cannot be sold on its own as a product)
- b. Provision through OSS combinations (While it's not impossible to verify them yourself, there are many possible combinations)
- c. Maintenance Alternative (While it's not impossible to maintain it yourself, outsourcing ensures better quality and greater efficiency)
- d. Technical Inquiries (You can look it up yourself, but asking is faster)
- e. Certification is required for business purposes

Tier 1: Companies Providing Services as OSS

- OSS Strategy and Actions

- a. The continued existence of OSS enables the creation of distributions
 - i. Patch Submission
 - ii. Documentation maintenance (to expand the developer and user base)
 - iii. Community Outreach, Operational Support, and Promotion (Maintaining the Distribution's Foundation)
- b. The growth of OSS leads to an expansion of the potential customer base
 - i. Meetup events and seminars (expanding the user base)
- c. Enhancing business value (brand?)
 - i. Continuously submit patches
- d. Establishing a de facto standard
- e. Ability to request assistance from developers
- f. (While this might fall under Strategy ①, submitting patches also contributes to developer training)

Why not summarize it in a table?

	Patch Submissions			
Community Sustainability	○ ◎			
OSS development, expansion of potential customers				

March 15, 2024

- Listed by telecommunications business (entity)
- Expand the URLs for the slides and spreadsheet (Mota's homework)
- April 12, starting at 3:00 PM.

April 12, 2024

For the automotive and telecommunications industries

April 12, 2024

- OSS communities are important in both the telecommunications and automotive industries
- We are still exploring our OSS strategy
 - There is a recognition that OSS must not disappear, so activities to ensure the community's survival are necessary
- Discussions are based on the assumption that automakers receive finished products from Tier 1 suppliers
- Industry standards are shaped by the community
 - When viewed over a long-term horizon of five or ten years, it appears that automakers and telecommunications carriers are setting the direction
 - For telecommunications carriers, standards like 3GPP represent this trend
 - It is healthy for the OSS community to handle this, including interoperability

- ソフトウェアサプライチェーン最下流に位置することによる課題が存在
 - ◆ 様々なOSSリスクが集約される（例、混入したOSSリスクの影響を受けやすい）
 - ◆ 膨大な納品物の管理（例、管理対象のソフトウェアが膨大）
 - ◆ 膨大な納品物に含まれるOSSの管理（例、管理対象のSBOMが膨大）
 - ◆ ソフトウェアの管理が煩雑（例、頻繁なシステム置換、頻繁な脆弱性対応、頻繁なソフトウェア変更、等）
 - ◆ 監督官庁対応
- 最終頒布者の観点で「自動車業界」と「通信業界」は異なる

April 12, 2024

- A project to develop and standardize the Teleco API
 - <https://camaraproject.org/>
 - Projects like this are necessary for interoperability, and taking the lead on them— —would be a good OSS strategy.
- How do these kinds of cross-industry projects get launched?
 - They are sometimes brought to the Linux Foundation for discussion.
 - In the case of Open Daylight, for example, who takes ownership of the codebase?

April 12, 2024

- Does the SBOM ever return a claim?
 - What should you do if the SBOM contains software you don't want?
(Companies like Apple have certification processes, but...)
 - We haven't been able to thoroughly review it due to a shortage of engineers...
 - I understand that there are cases where people say, "Please don't include this license."
- Are telecom carriers also concerned about the AGPL?
- Could they reach out to the OSS community to have the license reviewed?
 - If the scope of use expands, it's also important to have the license changed to one that better suits the use case.
- As SBOMs evolve, it seems likely that it will become clearer which OSS components are being used.
 - We might be able to publish a ranking of OSS that is critical to our business.

April 12, 2024

- We'd like SBOMs to be generated during the build process. We've submitted a request to the OSS community.
 - This is considered a priority within cross-business OSS communities.
 - Following in the footsteps of pioneers
 - 👉 Since it is important for the OSS communities our company prioritizes to be widely adopted in business, we consider providing feedback on such business-oriented OSS to be part of our OSS strategy.
- Do you ever assign OSS-related tasks to client companies?
 - Not at this time. We do not currently outsource work to contractors; instead, we contribute in accordance with the licenses.
 - How about requesting work in a format that involves giving back to the community (or making an effort to do so)?
 - It depends on the contract... (Although we would like to foster a culture of contribution across the industry as a whole)
 - 👉 When we delivered OSS with custom features, we asked clients to choose between two options: "Add the maintenance cost of the patch every time there's a version update," or "Allow us to contribute the developed patch back to the community to reduce costs." In most cases, they permitted us to contribute back to the community.

May 10, 2024

In the case of semiconductor vendors

May 10, 202

- Business: Suppliers for manufacturing hardware
 - Profit and software are separate and not directly linked
 - In the supply chain, they are midstream. They receive components from upstream IP vendors and distribute them to downstream manufacturers.
- The industry is shifting from “standards-first” to “OSS-first”
- What should they do for the OSS community?
 - (For communities with broad demand) Fostering and sponsorship
 - Building communities. Hosting.
- There is significant participation in projects under the Linux Foundation from companies such as Intel and NVIDIA.
 - Taking action to ensure our own semiconductors can be used = fostering
 - We also want to be incorporated into larger communities for maintenance purposes

May 10, 202

- ARM has established a non-profit organization centered around Linaro
 - Hiring software engineers from nonprofit organizations
- Activities unrelated to our core business are becoming increasingly important

June 14, 2024

In the case of online sales services

June 14, 2024

- We use OSS for product development (as you might expect)
 - We also use OSS for internal tools
 - OSS is used for URL shortening, parts of the Q&A bot in our internal communication tool, and other purposes
 - Decisions regarding sponsorship of core OSS (Python, PHP, etc.) are made based on usage volume and importance
 - We have exhibited at OSS-related events. There have been instances where engineers proposed such initiatives, and the company reviewed and approved them
 - Aimed at fostering networking among engineers and maintaining their motivation
 - We try not to make it too obvious that the company is a sponsor

June 14, 2024

- There is a clear policy regarding OSS activities.
 - Contributions are permitted. We do not track statistical data such as the number of contributions.
 - We mention OSS in blog posts and videos to highlight that we actively use it and that contributions are possible.
 - We have not imposed any restrictions on these activities (to maintain engineer motivation).
- OSS Release
 - We have a GitHub corporate account, and we are able to make decisions regarding what to make public
 - There is a publication workflow in place. After passing basic tool checks—such as for license violations—the process is automated to allow for review by the relevant departments
 - We publish on a per-GitHub-repository basis
 - After publication, promote the release on social media and blogs

June 14, 2024

- OSPO originated from an OSS licensing issue raised by an engineer.
- Some software is transitioning from OSS licenses to commercial licenses, which has become a challenge.
 - Engineers keep a close eye on these developments, and (as part of our culture) they contact the OSPO at
 - Policy violations detected by scanning tools trigger alerts

Results of anticipated challenges for persona companies

- Contribution activities often share many common elements
- The impact varies depending on the company's persona.

OSS Strategy & Hosting

- We are currently discussing the weighting of contribution activity items and their impact across each persona company

- Please join us

July Agenda

- July 10 (Fri) 3:00 PM–
 - Continuation: Mapping the Four Stages of OSS Strategy Using Diagrams
 - I'd also like to add comparisons of each case study before and after adopting OSS
 - We'll also consider how to approach open-closed strategies
 - Organize the information from a standardization perspective, separate from the industry-specific breakdown
 - Organize with the goal of “weighting OSS activities”
 - Organize common elements and elements specific to each persona
 - Continue to bridge the gaps
 - Continuation of the discussion on how to summarize

About the Next Meeting

- Friday, August 21, 3:00 PM–
 - Continuing to map the four stages of the OSS strategy using diagrams
 - I'd also like to add comparisons of each case study before and after adopting OSS
 - We'll also consider how to approach open-closed strategies
 - Organize the material from the perspective of standardization, separate from the industry-specific breakdown
 - Organize with the goal of “weighting OSS activities”
 - Organize common elements and elements specific to each persona
 - Continue to bridge the gaps
 - Continuation of the discussion on how to summarize

June Agenda

- June 19 (Fri) 3:00 PM–
 - Continuation of mapping the four stages of the OSS strategy using diagrams
 - I'd also like to add comparisons of each case study before and after OSS adoption
 - We'll also consider how to approach open-closed strategies
 - Organize the information from a standardization perspective, separate from the industry-specific breakdown
 - Organize with the goal of “weighting OSS activities”
 - Organize common elements and elements specific to each persona
 - Continue to bridge the gaps
 - Continuation of the discussion on how to summarize

May Agenda

- May 29 (Fri) 3:00 PM–
 - Continuation of mapping the four stages of OSS strategy using diagrams
 - I'd also like to add comparisons of OSS initiatives before and after implementation for each case study
 - Organize by standardization, separate from the industry-specific categorization
 - Organize with the goal of “weighting OSS activities”
 - Organize common elements and elements specific to each persona
 - Continue to fill in the gaps
 - Continuation of the discussion on how to summarize

April Agenda

- April 10 (Fri) 3:00 PM–
 - Mapping to the Four Stages of OSS Strategy Using Diagrams
 - Organized by standardization rather than by industry
 - Organization aimed at “weighting OSS activities”
 - Organizing common elements and elements specific to each persona
 - Continue to bridge the gaps
 - Continuation of the discussion on how to summarize

March Agenda

- March 13 (Fri) 3:00 PM–
 - Add an additional perspective on standardization by industry
 - Organizing with the goal of “weighting OSS activities”
 - Organizing common elements and elements specific to each persona
 - Continue to bridge the gaps
 - Continuation of the discussion on how to summarize

TODO

February Agenda

- February 13 (Fri) 3:00 PM–
 - Organizing with a Focus on “Weighting OSS Activities”
 - Organizing Common Elements and Persona-Specific Elements
 - Continue to bridge the gaps
 - Continuation of the discussion on how to summarize
 - Comments received last time
 -

I think the current approach to creating personas and dividing them by industry is good, but I felt that unless we add another layer (as Mr. Inoue also mentioned earlier), the logic behind the OSS initiatives might not resonate with readers.

There are motivations such as submitting patches to the Linux kernel or contributing to LTS, but there are also cases where related vendors collaborate on OSS at a different layer.

① This is a slight digression, but here's Gemini's response when asked why semiconductor companies engage in open-source development.

==

To put it simply, the development of open source (and open standards) aimed at accelerating memory performance and improving data transfer efficiency is currently very active in the semiconductor industry.

This was previously an area where individual companies had locked in their own proprietary technologies, but against the backdrop of explosive advances in AI and big data processing, there is a growing sense of urgency that “unless the industry as a whole establishes common standards, memory will become a bottleneck and overall computer performance will not improve.”

January Agenda

- Jan. 9 (Fri) 3:00 PM–
 - Organizing with a Focus on “Weighted Priorities for OSS Activities”
 - Organizing Common Elements and Persona-Specific Elements
 - Continue to bridge the gaps
 - Continuation of the discussion on how to summarize

December Agenda

- Dec. 19 (Fri) 3:00 PM–
 - Self-introductions ↗
 - Organizing Objectives for “Weighted OSS Activities”
 - Organizing common elements and persona-specific elements
 - Continue to bridge the gaps
 - Continuation of the discussion on how to summarize

November Agenda

- Friday, November 14, 3:00 PM–
 - Organizing with the Goal of “Weighting OSS Activities”
 - I put this together for the recent LF Japan Community Days, but simply extracting high-priority items leaves the explanation incomplete and feels off
 - Don’t we need some background context?
 - Proceed with organizing the “Objectives for Persona Companies and Industry Sectors” in terms of stacks and metrics, and use that as a basis to reorganize the persona companies
 - OSPO Launch Case Study Presentation ➡ Lightning Talks
 - I’d like to do this at an OSPO Japan WG event
 - Present it at the joint LF Japan Community Days and OSSJ session
 - It might also be a good idea to have it presented at the IPA’s “ ”
 - <https://www.ipa.go.jp/event/2025/briefing-ospo-workshop20251002.html>
 - Continuation of the discussion on how to summarize

October Agenda

- October 10 (Fri) 3:00 PM–
 - Clarifying the Objectives of “Weighting OSS Activities”
 - Continue organizing the “Objectives for Persona Companies and Industry Sectors” in terms of priorities and metrics, and use that as a basis to reorganize the persona companies
 - Based on the feedback received regarding this draft, we would like to refine the weighting of persona companies toward a final version
 - Looking further ahead, for companies that wish to self-host OSS, the approach is likely to shift from focusing on “persona companies” to focusing on the specific strategies they will adopt using OSS
 - OSPO Launch Case Studies ➡ Lightning Talks
 - I'd like to present this at an OSPO Japan WG event
 - Present at the LF Japan Community Days and OSSJ joint session
 - It might also be worth having the IPA present this as well
 - <https://www.ipa.go.jp/event/2025/briefing-ospo-workshop20251002.html>
 - OSPO Launch
 - "LACK OF EXECUTIVE BUY-IN" was also cited in the 2025 report
 - https://www.linuxfoundation.org/hubfs/Research%20Reports/LFResearch_StateofOSPO_082025.pdf?hsLang=en
 - What is the relationship between AI and OSPO?
 - Since licensing is a concern, OSPO is being called upon
 - We're being approached because OSS is essential for advancing our AI strategy
 - Since Open Data is relevant, the OSPO gets involved
 - If there's no dedicated AI department, is OSPO the one to contact?
 - Continuation of the discussion on how to organize this

September Agenda

- September 12? (Fri) 3:00 PM–
 - Clarifying the Objectives of “Weighting OSS Activities”
 - Continue organizing the “Objectives for Persona Companies and Industry Sectors” in terms of priorities and metrics, and use that as a basis to reorganize the persona companies
 - Based on the feedback received regarding this draft, we’d like to refine the weighting of persona companies toward a final version
 - Looking further ahead, for companies that wish to self-host OSS, the approach is likely to shift from focusing on “persona companies” to focusing on the specific strategies they adopt using OSS
 - Continuation of the Discussion on Organization Methods

August Agenda

- Friday, August 8, 3:00 PM–
 - Clarifying the Objectives of “Weighting OSS Activities”
 - Continue organizing the “Objectives for Persona Companies and Industry Sectors” in terms of priorities and metrics, and use that as a basis to reorganize the persona companies
 - Review and refine the weighting based on the revised list of persona companies, using the discussions to date as a basis
 - Continuation of the discussion on how to summarize

June Agenda

- June 13 (Fri) 3:00 PM–
 - Organizing the Objectives for “Weighting OSS Activities”
 - Continue organizing the “Objectives for Persona Companies and Industry Sectors (for Organization)” stacks and metrics, and use that as a basis to reorganize the persona companies
 - Based on the discussions to date, prepare a draft version of the reorganized persona companies (Takanori)
 - Continuation of the discussion on how to summarize

May Agenda

1. Organization Aimed at “Weighting OSS Activities”
 - a. Proceed with organizing the stacks and metrics for “Objectives for Persona Companies and Industry Sectors (for Organization),” and use that as a basis to reorganize the persona companies
2. Continuation of the discussion on how to summarize
3. Regarding the Next Meeting

April Agenda

1. Organizing with the Goal of “Weighting OSS Activities”
 - a. Persona Companies × Anticipated Strategies (Multiple possible depending on strategic level)
 - i. Extracted characteristics by stack for the objectives of persona companies and industry sectors (for organizational purposes) (in progress)
2. Continuation of the discussion on how to summarize
3. Regarding the Next Meeting

About the Next Meeting

- Friday, May 9, 3:00 PM–
 - Organizing the "Weighting of OSS Activities"
 - Continue organizing the stacks and metrics for “Objectives for Persona Companies and Industry Sectors (for Organization),” and use that as a basis to reorganize the persona companies
 - Continuation of the discussion on how to summarize

March Agenda

1. Discussion on revising the 8th line of “Weighting of OSS Activities”
 - a. Persona Companies × This could lead to a divergence in potential strategies (multiple strategies are possible depending on the strategic level)
2. Review and discuss the “overall weighting of OSS activities”
3. Continuation of the discussion on how to summarize
4. Regarding the next meeting

Weighting Sheet

Line 8: “Objective”

- Wouldn't it be better to narrow down the objective?
 - For example, if we say “securing talent,” it becomes a common objective across all industries and companies.
 - How about rephrasing it to focus on the primary objective?
- If you outline the business overview, state the primary objective, and describe the initiatives to achieve it, the document will have better coherence.
- Once you've organized the relationships between companies, can you see each company's specific objective (the combinations customers choose when making purchases)?

Consultation on How to Summarize the Results of OSS Strategy Discussions

- Intended Audience:
 - Draft: For Japanese professionals looking to launch an OSS strategy
 - Likely to be used to raise awareness among C-level executives
 - Proposal: (Conduct interviews with participants of the IPA's OSS Strategy Seminar)
- Output Format:
 - First, in slide format.
 - We'd like to have spreadsheets and documents as appendices or supplementary materials.
- Distribution: TODO Via the Group? Speakerdeck?
 - (Note: The OSPO FAQ has not been distributed yet.)
 - Proposal: It would be best if the TODO Group could prepare materials specifically for Japan.
- Potential presentations:
 - OSPO Con with OSSummit NA/Europe/Japan
 - TODO OSPO Book Meeting

About the Next Meeting

- April 11 (Fri) 3:00 PM–
 - Organizing the Objectives for “Weighting OSS Activities”
 - Continuation of the Discussion on How to Summarize

February Agenda

1. Brief recap of the previous meeting (Jan. 10)
 - a. Additional comments on the “Weighting of OSS Activities” section
2. Continuation of “Weighting of OSS Activities”
 - a. Organizing Contribution Activity Items
 - b. Discussion on how to summarize results to date
3. About the Next Meeting

Consultation on How to Summarize the Results of OSS Strategy

Discussion Activities

- Intended Audience:
 - Draft: For Japanese individuals looking to launch an OSS strategy
 - Likely to be used to raise awareness among C-level executives
 - Proposal: (Conduct interviews with participants of the IPA's OSS Strategy Seminar)
- Output Format:
 - First, in slide format.
 - We'd like to have spreadsheets and documents as appendices or supplementary materials.
- Distribution: TODO Via the Group? Speakerdeck?
 - (Note: The OSPO FAQ has not been distributed yet.)
 - Proposal: It would be best if the TODO Group could prepare materials specifically for Japan.
- Potential Presenters:
 - OSPO Con with OSSummit NA/Europe/Japan
 - TODO: OSPO Book Meeting

About the Next Meeting

- Friday, March 14, 3:00 PM–
 - Discussion on revising line 8 of “Weighting OSS Activities”
 - Persona Companies × The discussion may branch out based on the assumed strategy (multiple strategies are possible depending on the strategic level)
 - Discussion on revising the “Weighting of OSS Activities” as a whole
 - Continuation of the discussion on how to summarize

January Agenda

1. Introduction to OSS Strategy ➦ + Q&A
2. Continuation of “Weighting of OSS Activities”
 - a. Further discussion on contribution activities
 - b. Filling in the Gaps
3. Looking Ahead

September Agenda

1. About the OSPOjp Meetup on October 18 (OpenChain JP Co-located Event)
2. Continuation of the Weighting Discussion

OSPOjp Meetup on October 18 (OpenChain JP Co-located Event)

- Ana (TODO Group LF member) has been invited.

- Draft Agenda

- Introduction to global activities ➡ by Ana
- Presentation on OSPOjp activities (slides in English) by Motai and Owada
 - We'd like to discuss how to present the outputs of OSPOjp's activities.
- Lightning Talks session. We'd also like Ana to listen to some of the presentations.
 - The survey will be displayed in both English and Japanese. We'll tally the results on the spot to liven things up.
 - If anyone wants to speak, we'll invite them to do so.
- OSPO Open Consultation Session #2.
- (If only the usual crowd① shows up) We'll do our usual activities.

August Retrospective

- Let's summarize the weight of OSS activities by field in a table.
 - Sheet: [OSPO Japan Local Meetup - OSS Strategy, Weighting Sheet](#)
 - *Please define the license before publishing.

Conceptual diagram (priority values are arbitrary)

3						
4	企業（の中の人が行う）オープンソースコントリビューション活動			ペルソナ企業・産業分野		
5				OSSに関連するサービス販売		
6				Linuxディストロベンダー	家電ベンダー	Sier企業
7				狙い		
8				・ユーザーベースの拡大 ・ディストロの強化 ・プロジェクトのサステナビリティ確保		・DXソリューション ・システムづくり ・プレゼンス強化
9	コミュニティ開発	パッチ投稿		優先度高		
10		メンテナー（パッチレビューなど）		優先度中		
11		不具合の報告		優先度低		
12		Issue登録		優先度中	優先度高	
13	コミュニティ運営					
14		スポンサーする				優先度高
15		内部の定例会議に参加				
16						
17	コミュニティ発展支援					
18		Meetup 開催				
19		Meetup 発表				
20		利用事例の発表				
21						
22						
23	コミュニティ形成	仲間集め				

July Review

- Although the “weights” differ, there are commonalities across activities that transcend specific fields.
 - Weight: In the ○○ field, sponsorship is more important than submitting patches.
 - It would be interesting to compare the weightings across different fields.
 - Examining why these differences in weight arise could yield new insights.
- Reference:
 - [Definition and Guide to the Open Source Program Office \(OSPO\)](#)
[WHY] Externally, the OSPO serves as a vital bridge between the organization and the open-source community, helping to ensure that the organization acts as a responsible steward of open-source software and maximizes the benefits while minimizing the risks associated with open-source adoption. Internally,...
-

8Monthly

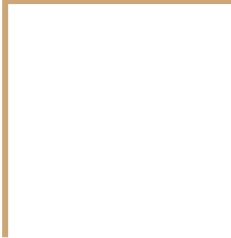

Notes

- Will strategies change as the role of software evolves?
 - (Examples in AI) codeware, promptware, ..., agentware
 - <https://arxiv.org/pdf/2402.15943>
I wonder if this kind of movement is emerging as a form of open-sourcing around AI in the Software 2.0 era and beyond. Model Openness Framework
 - <https://lfaidata.foundation/blog/2024/04/17/introducing-the-model-openness-framework-promoting-completeness-and-openness-for-reproducibility-transparency-and-usability-in-ai/>
- There are frequent instances where SI firms' activities are limited to simply using OSS.
 - It would be fine if OSS were sustainable, but it would be a problem if OSS were actually failing.
- Next time: September 13

9Monthly

Notes

- I've filled out the table.
 - Since the adoption of OSS varies by business line, it's hard to make a blanket statement for the company as a whole.
- **There is value in discussing the points where we're unsure as we fill out the table.**
 - Contributions to OSS vary depending on whether it relates to one's own business or not.
 - For example, the weight given to PyTorch will differ between companies that consider it important and those that don't.
- Comments
 - Would things change if we focused on the objectives of specific target companies?
I thought it might be easier to understand if we outline a specific OSS utilization strategy.
 - We categorized them by "persona companies," but should we categorize them by "persona business" instead?
 - Does "community development" change depending on how the community is classified? → Next month: Discuss classification methods, fill in the gaps, and verify
 - AI community, Linux community, Cloud community
 - Communities like OpenChain
- The next meeting is on October 18 at OSPOjp.

Current Discussion Topics

OSPO Implementation Strategy and OSS Strategy

We will discuss these points

1. Recognize which OSS is important for the business
2. How to get involved
 - a. Contributions
 - b. Foundation and sponsors
 - c. Maintainers...
3. What to Do Within the Company to Foster Engagement
 - a. Rules and Processes
 - b. KPIs
 - c. Organization, Internal Structure, and Internal Collaboration
 - d. Compliance
4. What role should the OSPO play?

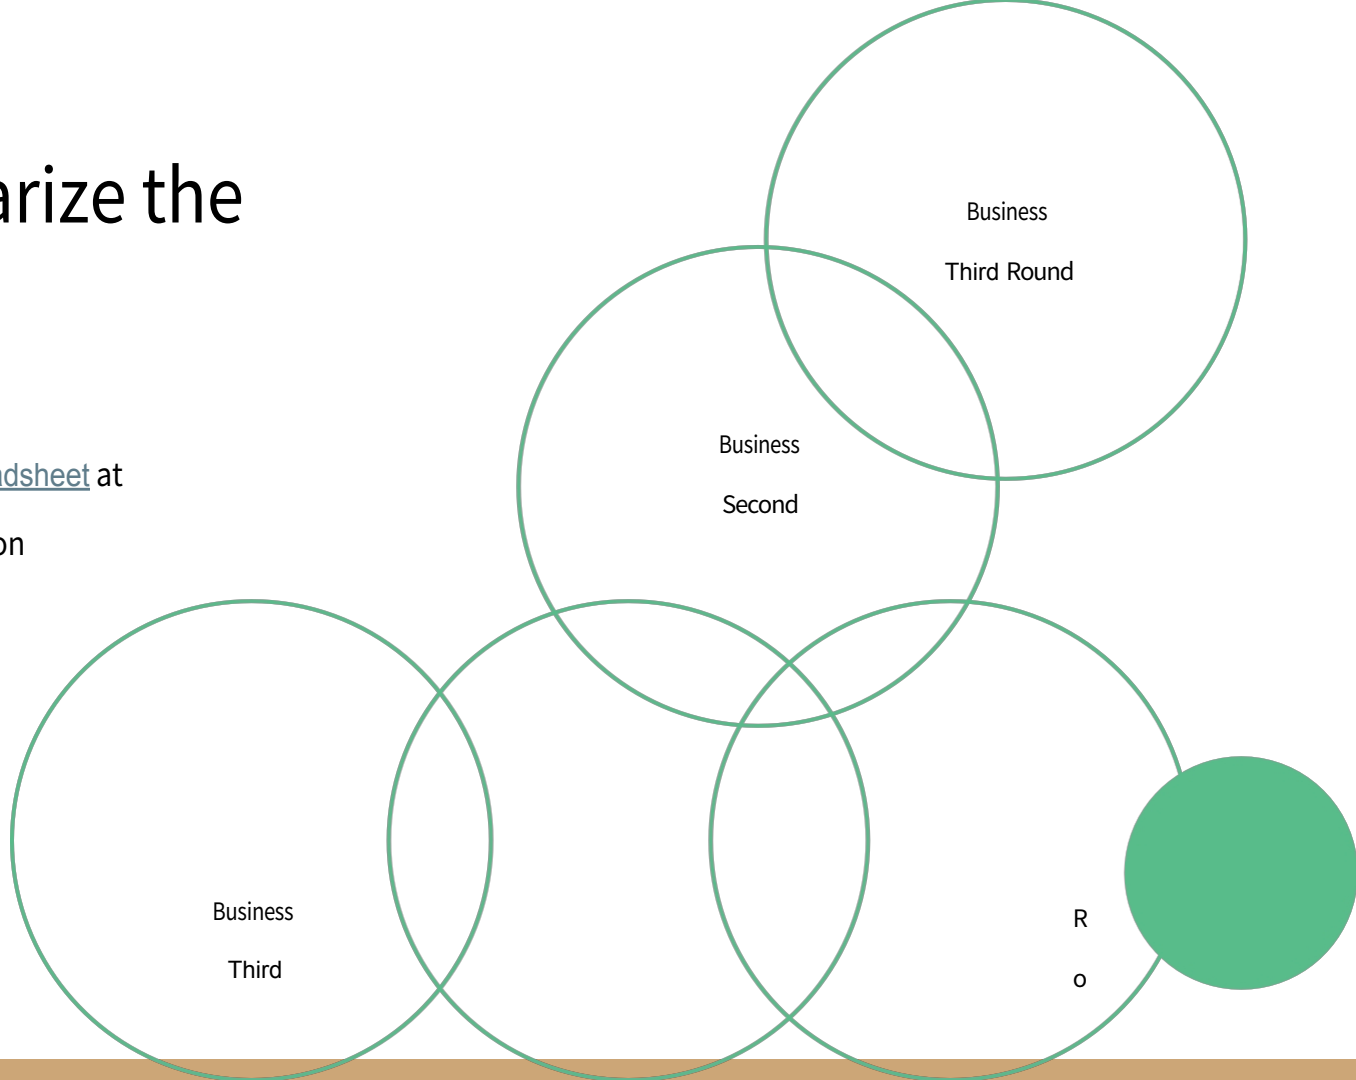

1. Should we discuss product/service and OSS strategies?
 - a. Next time, we'll discuss how to consolidate this into an OSS strategy.
 - b. We will proceed with the OSPO strategy in the QA section.

We will discuss challenges related to the OSS Strategy. We will not discuss challenges related to the establishment or activities of the OSPO (at least for now).

How to Summarize the

Results

- Slides created from [the spreadsheet](#) at
- I put together a simple version
- I'd like to refine them further

Business

Second

Business

First Round

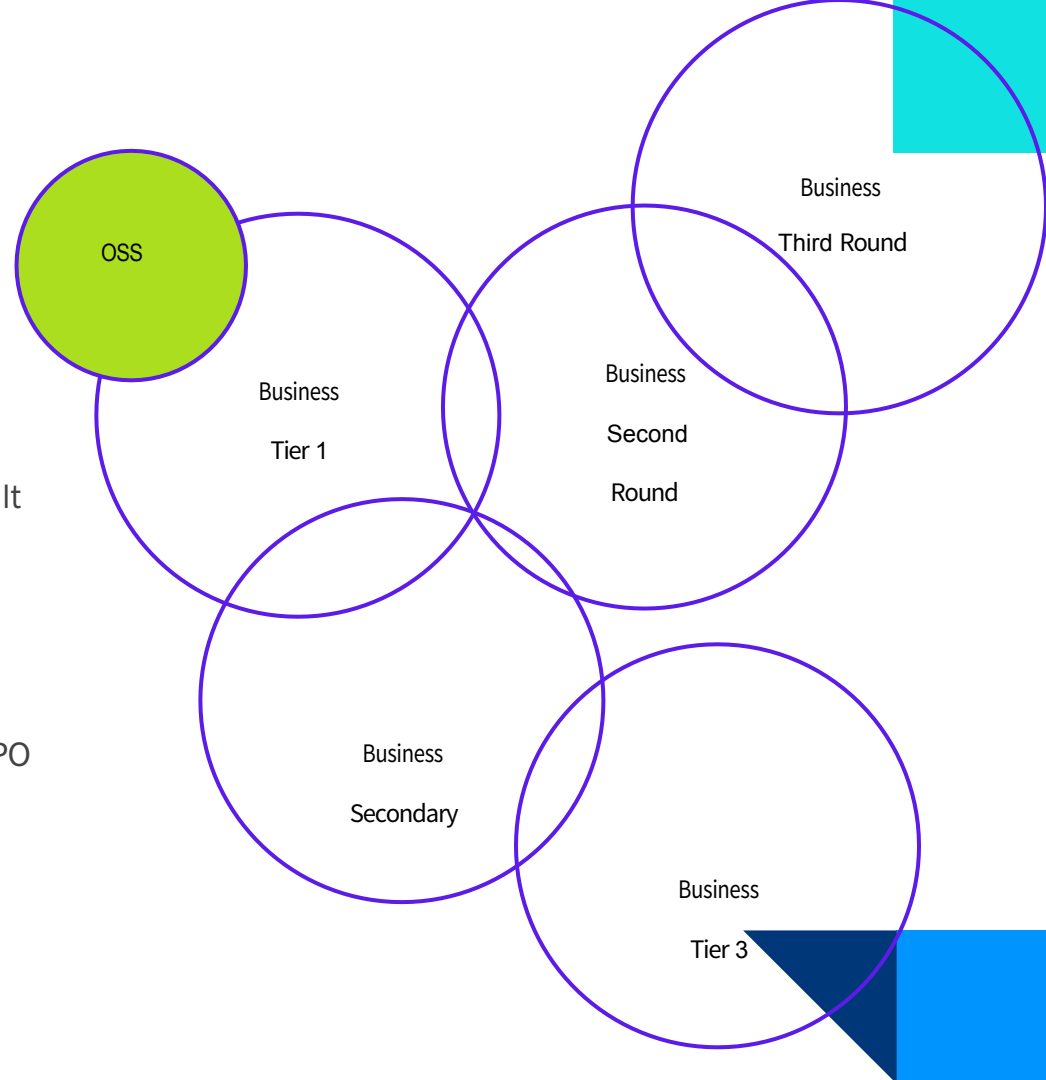

OSS

OSS Strategy & Hosting

- OSS Is Essential to Business
- OSS itself does not generate profit
- Profits Are Generated Through the Utilization of OSS
- Businesses Closely Tied to OSS vs. Those Distant from It

A forum to explore these relationships and discuss challenges

- *We will not discuss the following or the role of OSPO
 - Rules and Processes
 - KPIs
 - Organization, Internal Structure, and Internal Collaboration
 - Compliance

OSS Strategy & Hosting

- Imagine the challenges faced by companies (personas) that utilize OSS in their business operations
 - Linux Distribution Vendors
 - Automotive and telecommunications industries
 - Semiconductor Vendors
 - Online retail services
 - Cloud services (not yet under consideration)
 - OSS Consulting Services (Under Consideration)
- The required OSS contribution activities are largely the same
- However, the degree of business impact for each activity differs
