OSS Strategy

Antitrust Policy Notice

- Linux Foundation meetings involve participation by industry competitors, and it is the Linux Foundation's intention to conduct all of its activities in accordance with applicable antitrust and competition laws. It is therefore extremely important that attendees adhere to meeting agendas and be aware of—and refrain from participating in—any activities prohibited under applicable U.S. state, federal, or foreign antitrust and competition laws.
- Examples of prohibited actions at Linux Foundation meetings and in connection with Linux Foundation activities are described in the Linux Foundation Antitrust Policy, available at http://www.linuxfoundation.org/antitrust-policy. If you have questions about these matters, please contact your company's legal counsel, or, if you are a member of the Linux Foundation, feel free to contact Andrew Updegrove of the law firm Gesmer Updegrove LLP, which provides legal counsel to the Linux Foundation.

[Reference]

Antitrust Compliance Policy

- Participation by companies that are competitors in the industry is essential for Linux Foundation (hereinafter referred to as “LF”) meetings. The LF conducts all of its activities in compliance with all applicable antitrust and competition laws. Therefore, it is extremely important that meeting attendees take care to conduct meetings in accordance with the agenda and refrain from participating in any activities prohibited under domestic or international antitrust and competition laws.
- Examples of prohibited conduct at LF conferences and in connection with LF activities are set forth in the LF Antitrust Compliance Policy, available at https://www.linuxfoundation.jp/antitrust-policy/. If you have any questions regarding these matters, please consult your company’s legal counsel or, if you are an LF member, contact Andrew Updegrove of Gesmer Updegrove LLP, the LF’s legal counsel.

Code of Conduct

- We conduct our activities in accordance with the Code of Conduct established by The Linux Foundation Japan https://www.linuxfoundation.jp/code-of-conduct/
  - This link was returning a 404 error, so it must be updated
    - Option 1: https://events.linuxfoundation.org/about/code-of-conduct/
    - Option 2: https://www.linuxfoundation.org/ja-jp/legal/code-of-ethics
- **Unacceptable Conduct (Excerpt)**
  - **we do not tolerate any form of harassment**, including but not limited to harassment based on gender, gender identity, gender expression, sexual orientation, disability, appearance, body type, race, age, or religion, as well as harassment based on any status or position protected by the laws of the country or region where the conference or program is held.
  - Furthermore, the use of abusive, aggressive, or humiliating language; threats; stalking; harassing photographs or recordings; inappropriate physical contact; sexual images; and unwelcome sexual advances or requests for sexual favors are also considered harassment.
  - Participants who are asked to stop harassing behavior must comply with that request immediately. Witnesses or victims of unacceptable behavior should immediately notify the conference organizers.
- **Incident Response (Excerpt)**
  - If a participant is involved in harassing behavior, the conference organizers will take any action deemed appropriate under the circumstances, including issuing a warning to the offender or expelling them from the conference.

OSS Strategy & Hosting: Introduction to Our Activities

Last Updated October 2024

THE LINUX FOUNDATION

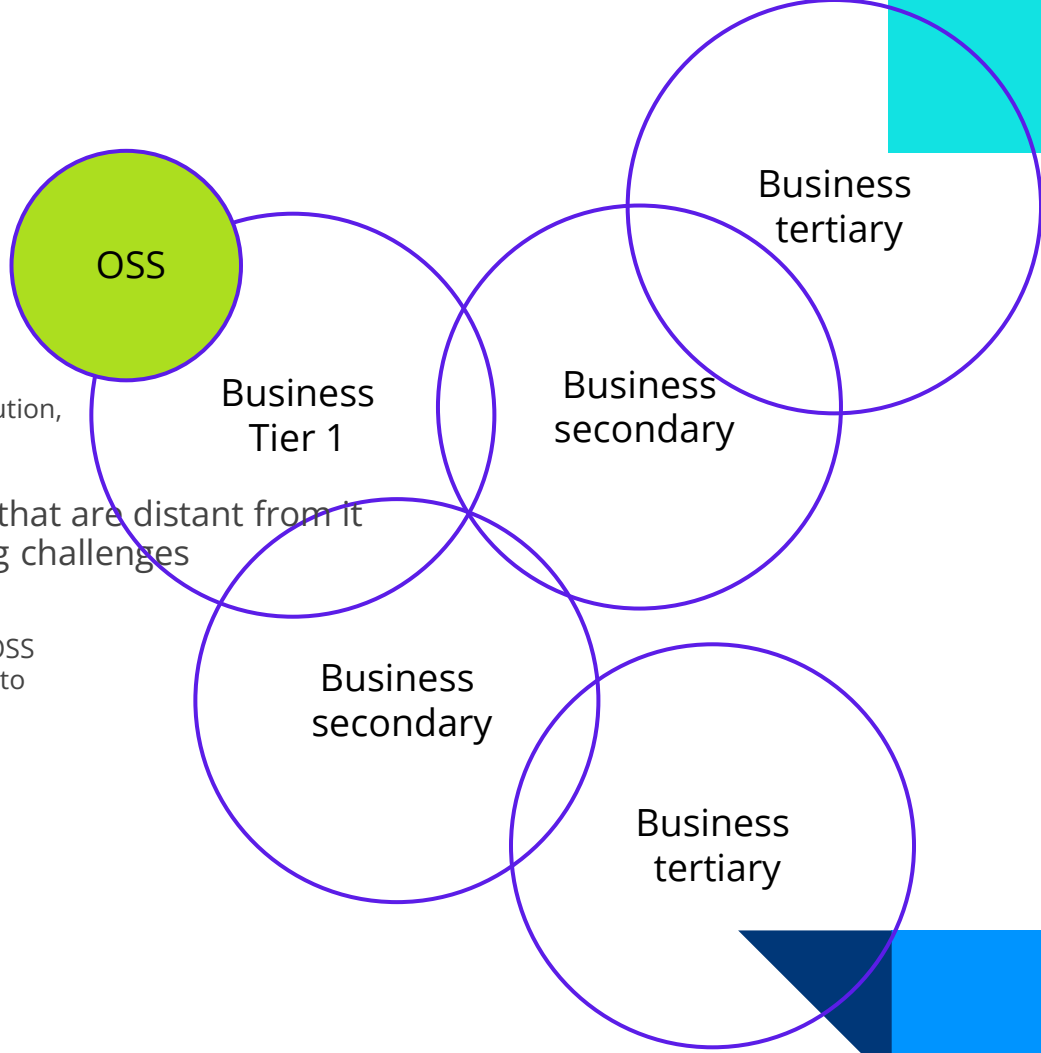

OPENCHAIN

TODO

OSS Strategy & Hosting

- OSS Business Strategy and Our Company's Hosting
  - Going beyond OSS usage and license compliance —aiming for a higher level (participation, contribution, leadership)

- businesses that are close to OSS and those that are distant from it Considering that relationship and discussing challenges
  - OSS is essential to business
  - OSS itself does not generate profit
  - Profits are generated through the utilization of OSS
  - Visualizing these relationships makes it possible to justify the initiative

THE LINUX FOUNDATION
OPENCHAIN
TODO

OSS Strategy & Hosting

- Motivation,
  - A sense that there is a barrier to moving beyond mere usage to the next stages (participation, contribution, leadership)
- anticipated challenges,
  - it is difficult to see a clear path or role models for transitioning from usage to contribution
  - and wouldn't it be helpful to have more concrete OSS strategies to draw upon?
  - While "Your OSPO is not my OSPO," even if each OSPO is distinct, there may still be commonalities and best practices across industries and business models:
- and presentation of specific examples to serve as references
  - presentation of typical examples by industry and sector,
  - and mutual presentation of OSPO initiatives by various companies during lightning talks (to be considered for future Meetups)

THE LINUX FOUNDATION OPENCHAIN TODO

OSS Strategy & Hosting

- Imagine the challenges faced by companies (archetypes) that conduct business by utilizing OSS
  - Linux Distribution Vendors
  - consumer electronics vendors
  - system integrators
  - telecom operators
  - Automotive Manufacturer
  - semiconductor vendors
  - web service companies
  - universities and research institutions
  - corporate R&D departments
  - local governments and public institutions
  - generally, IT departments (additional?)
- The required OSS contribution activities are largely the same
- However, the degree of business impact varies for each activity

THE LINUX FOUNDATION OPENCHAIN TODO

Q: What are the benefits of OSS activities for companies that utilize OSS?

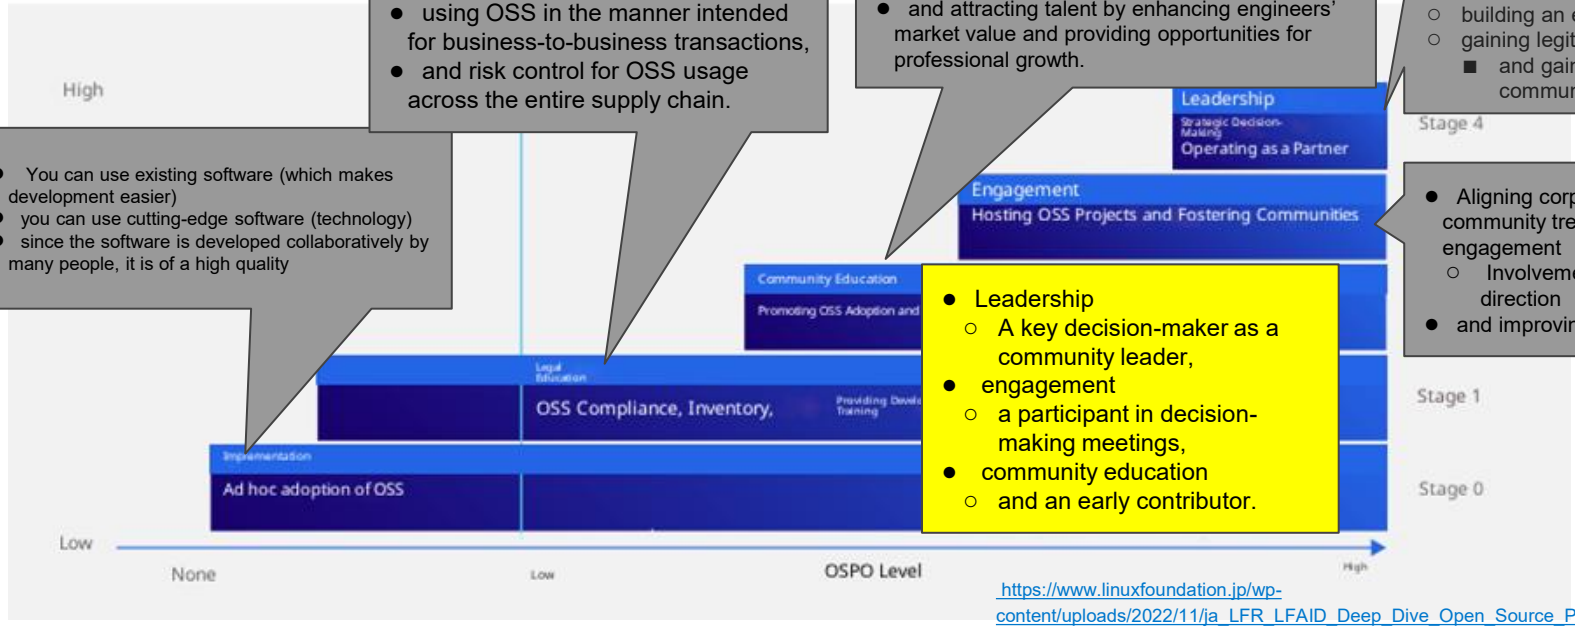

Fix

- Compared to handling it in-house, having many engineers involved makes it easier to find bugs, and fixes are more accurate and faster,
- efficient use of development resources through community collaboration;
- a platform for talent development, retention, and acquisition;
- and attracting talent by enhancing engineers' market value and providing opportunities for professional growth.

- Creation of businesses leveraging OSS
  - Expansion of the market and potential customer base
  - establishment and adoption of de facto standards
  - building an ecosystem,
  - gaining legitimacy for our activities,
    - and gaining endorsement from community participants

- Enabling businesses to use OSS properly and with confidence,
- using OSS in the manner intended for business-to-business transactions,
- and risk control for OSS usage across the entire supply chain.

- You can use existing software (which makes development easier)
- you can use cutting-edge software (technology)
- since the software is developed collaboratively by many people, it is of a high quality

- Leadership
  - A key decision-maker as a community leader,
- engagement
  - a participant in decision-making meetings,
- community education
  - and an early contributor.

- Aligning corporate expectations with community trends through community engagement
  - Involvement in development direction
- and improving engineer motivation

OSS Strategy & Hosting (In Progress)

	General
Business Overview	
Desired Benefits of OSS	
Initiatives to Achieve Our Goals	- Talent Acquisition - Information Dissemination - OSS Talent Evaluation? Fostering a Supportive Culture?
OSS Activities to Be Implemented	High Priority

OSS Strategy & Hosting (Common)

	Common
Business Overview	A wide range of industries
Expected Benefits from OSS	- Interoperability - Expanding and developing markets (increasing the potential customer base) - Open innovation (creating new value and ideas) - Cost sharing (reducing costs per company) - Avoiding vendor lock-in - Securing talent
Initiatives to Achieve the Objectives	Standardization → As expected for a high-level stage, the tasks and standards are demanding - Participation in and leadership of OSS communities - Example: Joint Development Foundation: C2PA (standard) (CAI, the OSS implementation, is not part of the LF) - CNCF and OpenInfra have clear criteria for donating OSS projects and advancing to higher stages (CNCF incorporates best practices) - (It would be helpful to have a practical guide indicating which foundation is best, or a classification of the characteristics and approaches of each foundation) - Participating in and leading OSS implementations - Sharing Information
OSS Activities to Be Implemented	High Priority

OSS Strategy & Hosting (Common)

	Common
Business Overview	A wide range of industries
Situation Before OSS Initiatives	Unable to compete with the market share of leading companies.
Situation After Adopting OSS	Companies other than the market leaders join forces to compete against them.
Cases Where OSS Adoption Is Not Pursued	In some cases, the market leader may have an advantage by remaining closed-source.

OSS Strategy & Hosting: Persona Case Studies (in progress)

	Linux Distribution Vendor	Consumer Electronics Vendor	System Integrators	Telecom Operators
Business Overview	Sales of Linux Technical Services	Product Sales	System Contracting and Solution Development	Provision of Telecommunications Services
Our Primary Objective Regarding OSS	Promoting and strengthening our own distribution	Streamlining product development and enhancing maintenance	Improving efficiency from development through operation and maintenance	Ensuring quality and safety in the supply chain during the transition to the era of OSS-based Software-Defined technologies
Initiatives to Achieve These Objectives	・Expanding the user base ・strengthening distributions ・Ensuring project sustainability	・Support for standard interfaces ・Streamlining product development (supporting enhanced functionality and accelerated development) ・Providing long-term product support	・Expanding the lineup of DX solutions ・Experience in system development ・Enhanced market presence ・Reducing costs through the use of OSS to make it easier to win orders	・Establishing industry standards (standardization) ・Achieving vendor neutrality ・Ensuring long-term product support
OSS Activities to Be Implemented	High Priority - Submitting patches - Participate in regular community meetings (GB, AB, TSC)	High Priority - Reporting bugs - Issue Registration - Presenting use cases - Research, evaluation, and selection of OSS communities Should these be added? - Isn't sharing information important in every industry?	High Priority - Submitting patches - Maintainers - Reporting bugs - Issue Registration Should these be added? - Sponsorship Initiatives (It's difficult to explain these unless they're tied to business strategy. An explanation is needed, such as: "Securing a position is essential, and to do that, we need to strengthen our presence." It's hard to justify plain OSS if it doesn't directly benefit the business.) (It's also necessary to communicate	High Priority - Reporting bugs - Issue Registration - Sharing use cases - Recruiting members in the community (searching for business partners) - To achieve standardization - JDF Facilitates the Integration of Standardization and OSS - JDF has been accredited by ISO/IEC JTC 1, an international standardization body, as a PAS (Publicly Available Specification) submitter. JDF is an

OSS Strategy & Hosting Persona Case Study (in progress)

	Linux Distribution Vendor	Consumer Electronics Vendor	System Integrators	Telecom Operators
Business Overview	Sales of Linux Technical Services	Product Sales	System Contracting and Solution Development	Telecommunications Service Provision
Our Primary Objective Regarding OSS	Promoting and strengthening the company's own distribution	Streamlining product development and enhancing maintenance	Improving efficiency from development through operation and maintenance	Ensuring quality and safety in the supply chain during the transition to the era of OSS-based Software-Defined technologies
Challenges Associated with Simply Using OSS (Primarily at the consumer stage)	・Low awareness ・May cause customers to worry about continuity, potentially leading to a decline in sales ・Concerns regarding the long-term viability of the underlying OSS	・The need to support the company's proprietary standard interfaces ・Significant burden in providing long-term product support ・Quality and safety issues in the supply chain	・Competition between commercial products and OSS (inability to meet OSS adoption needs; need to enhance brand awareness and market presence) ・Divergence from de facto standards	・Development based on proprietary standards ・Compliance with proprietary standards ・Supply chain quality and safety issues
Value gained from contributing to OSS (primarily at the Contributor level and above)	・Expansion of the user base ・Improved project sustainability ・Generating demand and awareness for commercial services ・Identifying potential customer segments within the community ・Gaining technical trust and establishing a strong presence among users and customers	・Streamlining development through cost-sharing via OSS in collaborative areas (support for standard interfaces, implementation of long-term product support) ・Securing a leadership position and expanding the user base through the standardization of our company's advanced technologies	・Strengthening our lineup of DX solutions ・Gaining experience in system development ・Enhancing our market presence ・Reducing costs through OSS utilization to make it easier to win orders ・Adding features to create a pluggable architecture	・Establishing industry standards (standardization) ・Achieving vendor neutrality ・Ensuring long-term product support
Cases Where OSS Adoption Is Not Pursued	(Specifically, aspects that are not free, rather than OSS) ・Providing technical support ・Customer-specific engineering services	・Keeping key differentiating features (such as UI and apps—the upper layers) proprietary ・Log data used for maintenance and service improvements	・Functionality plugins for enterprise customers ・System development and operation know-how ・Integration solutions with other products (system integration itself) ・Support for specific requirements	・Operational know-how ・Aspects beyond protocol-defined specifications (performance, added value, cost reduction, etc.)

OSS Strategy & Hosting Persona Case Study (in progress)

	Automotive Manufacturer	Semiconductor Vendor	Web Services Company
Business Overview	Automobile Manufacturing and Sales	・Expanding sales of manufactured chips, such as LSIs and SoCs	Web service development and provision
Our Primary Objective Regarding OSS	Ensuring quality and safety within a massive supply chain during the transition to the era of OSS-based Software-Defined systems	Making our proprietary LSIs available on OSS platforms	Realizing efficient functionality and operation of service platforms
Initiatives to Achieve These Objectives	・Establishing industry standards (standardization) ・Achieving vendor neutrality ・Ensuring long-term product support	・Contributing our proprietary LSI drivers to the upstream project ・Promoting a community for developing solutions that leverage LSI features	・Optimizing cloud maintenance costs
OSS Activities to Be Implemented	High Priority - Reporting bugs - Issue Registration - Sharing use cases - Recruiting members in the community (searching for business partners) (On hold: I'd like to hear from people in the automotive industry) (To be discussed: Does contributing to OSS—such as kernel LTS—and providing reports as needed help improve the sustainability of OSS?)	High Priority - Submitting patches - Maintainer (patch reviews, etc.) - Reporting bugs - Issue Registration - Sharing use cases For example, by enhancing the software necessary to run products—such as Linux drivers for the company's own semiconductors—companies can indirectly boost sales of their own products. (Example: Intel adds support code for its own semiconductors to the Linux kernel in near real time.) In some cases, the fear that a product won't be adopted unless it supports Linux serves as a motivator → While the goal of supporting Linux drivers is the same, there's a tendency to provide only the bare minimum support. Companies often start by developing drivers without merging them into upstream, only to later realize that merging into upstream is more beneficial. (However, merging into upstream may only be beneficial for	Priority: Medium - Submitting patches - Reporting bugs - Participate in regular community meetings (GB, AB, TSC) - Sponsorship activities

OSS Strategy & Hosting Persona Case Study (in progress)

	Automotive Manufacturer	Semiconductor Vendor	Web Services Company
Business Overview	Automobile Manufacturing and Sales	・Expanding sales of manufactured chips, such as LSIs and SoCs	Web service development and provision
Our Primary Objective Regarding OSS	Ensuring quality and safety within a massive supply chain during the transition to the era of OSS-based Software-Defined systems	Making our proprietary LSIs available on OSS platforms	Realizing efficient functionality and operation of service platforms
Situation Prior to OSS Initiatives		There were few OSS platforms on which our in-house LSIs could run, and even when they did, performance was limited, making it difficult to put them to immediate use and resulting in limited sales. we were unable to compete with the market share held by leading companies.	
Situation After Adopting OSS		By contributing code to increase the number of OSS platforms on which our proprietary LSIs operate, making them readily available, and improving performance, we gain a competitive advantage and can more easily increase sales. We collaborate with other companies—other than the market leaders—to compete against them. (Contributor, Leader)	
Cases Where OSS Adoption Is Not Pursued		Keep the parts essential to securing the competitive advantage of the company's own LSI closed-source. (Example: Only the firmware portion is closed-source. In some cases, the market leader may have an advantage by keeping certain parts closed-source.)	

OSS Strategy & Hosting Persona Case Study (In Progress)

	Universities and Research Institutions	Corporate R&D Departments	Local Governments and Public Institutions	National Government
Business Overview	Publication of Research Findings and Raising Awareness	Publication of Research Findings and Their Application to Business	Provision of Citizen Services	Economic Development and Economic Security of the Country
Our Primary Objective Regarding OSS	Development of Cutting-Edge Technologies and Education	Development and Commercialization of Cutting-Edge Technologies	Efficient and widespread provision of public services → achieving standardization (horizontal expansion) → adoption of Open Source Software (OSS) for Government Applications	Reducing dependence on foreign companies (reducing the digital deficit, ensuring economic security)
Initiatives to Achieve These Objectives	・Publication of academic papers (followed by presentations at OSS events) ・Education through contributions to OSS	・Publication of academic papers (followed by presentations at OSS events) ・Incorporating feedback through contributions to OSS	・A framework, such as guidelines for OSS utilization, is necessary ・Launching and revitalizing OSS communities (OSS hosting) ・Promoting insourcing among local governments	
OSS Activities to Be Implemented	High Priority - Meetup presentations - Presentations on use cases - Recruiting members (finding business partners) - Building a local community - Technical training - Training on OSS development methodologies	High Priority - Meetup Presentations - Case study presentations - Recruiting Members (Finding Business Partners) - Building a local community	High Priority - Establishing common standards - Building local communities

OSS Strategies for Each Case: A Four-Stage Classification (Under Development)

April 10 Notes:

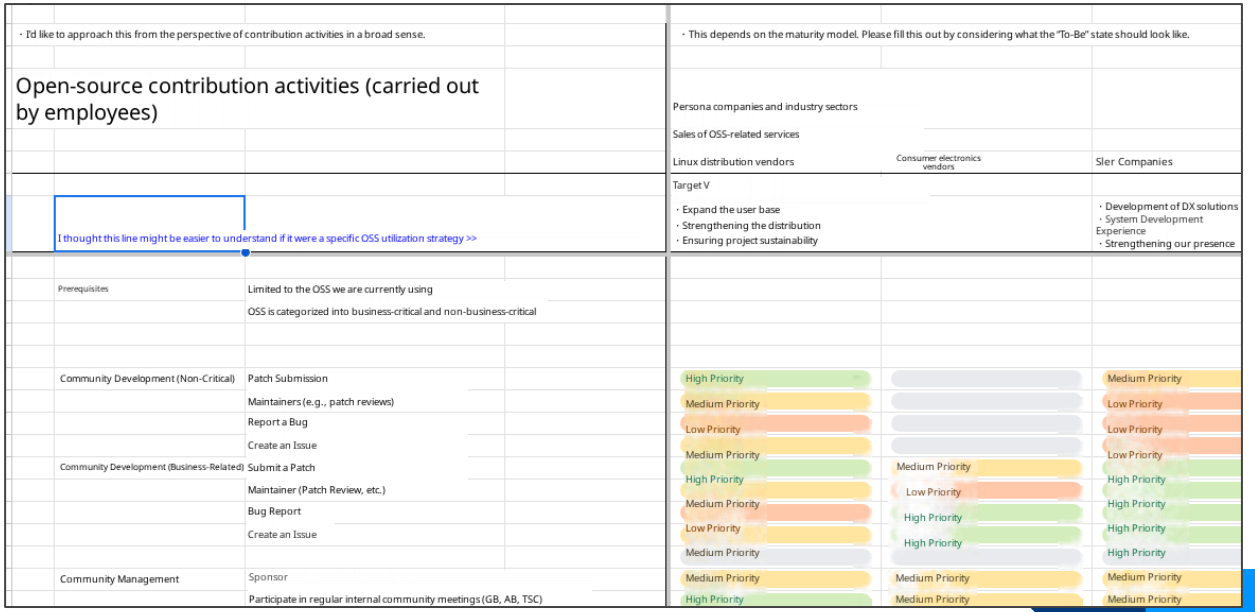

- before classifying, it would be helpful to see how things changed from “when there was no OSS” to “when there was OSS”
  - What benefits emerged before and after,
  - and which stage is the appropriate one for moving up the OSS ladder?

About the Next Session

- Friday, October 16, 3:00 PM–
  - Continuing to map the four stages of the OSS strategy using diagrams
    - I’d also like to add comparisons of each case study before and after OSS adoption
    - We’ll also consider how to approach open-closed strategies
  - organize the material from the perspective of standardization, separate from the industry-specific breakdown
  - organize with the goal of “weighting OSS activities”
    - organize common elements and elements specific to each persona
    - continue to bridge the gaps
  - and continuation of the discussion on how to summarize

About the Next Meeting
